## Contents

<b>Introduction</b>	<b>2</b>
<b>User Requirements “USER”</b>	<b>2</b>
<b>Functional Requirements “FUNC”</b>	<b>2</b>
<b>Non-Functional Requirements “NFUN”</b>	<b>2</b>
<b>Goals &amp; Requirements Under Review “GOAL”/“PREQ”</b>	<b>2</b>

## Introduction

This is a PDF translation for the .csv requirements matrix, to assist in readability and more in depth written justifications.

For the four types of requirements they will have naming schemes as follows: NAME\_ZZ\_YYYY(-XX) where Z denotes the major requirement category, Y the individual requirement ID, and X an optional sub-requirement specification (such as having a USER\_01\_0001, USER\_01\_0001-A, & USER\_01\_0001-B). The use of sub-requirements values can only be done in addition to a standard requirement (so you may not just use -A and -B without the generic 0001 with the previous example).

### User Requirements “USER”

### Functional Requirements “FUNC”

### Non-Functional Requirements “NFUN”

### Goals & Requirements Under Review “GOAL”/“PREQ”
